Contents

<i>Preface</i>	<i>page</i> 1
1 Introduction	3
1.1 The interstellar journey starts	3
1.2 The dream of travelling to the stars	4
1.3 Scope of this book	5
1.4 Types of interstellar mission	6
1.5 Units used in this book	6
1.6 Chapter overview	8
2 Why travel to the stars?	11
2.1 Motivations	11
2.1.1 General scientific considerations	11
2.1.2 Non-scientific motivations	13
2.2 Stellar systems	15
2.3 Exoplanets	16
2.3.1 Current status	16
2.3.2 Circumstellar habitable zone	17
2.3.3 What we can learn from an interstellar mission	20
2.4 Life	22
2.4.1 What is life?	22
2.4.2 Signatures of life	24
2.5 The nearest stars	26
2.5.1 Planets around the nearest stars	28
2.5.2 The Alpha Centauri system	31
2.6 Science on the way	32
2.7 Summary	35
3 Rockets	36
3.1 Rocket equation	36
3.2 Braking at the target star	39
3.3 Thrust equation	40
3.4 Travel time and distance for constant mass rate	40
3.5 Specific impulse and effective exhaust velocity	44
3.6 Energy and energy efficiency	45
3.7 Power	47

3.8	Staging	47
3.9	Instantaneous rocket	50
3.10	Launching from the surface of a planet	51
3.11	Summary	55
3.12	Exercises	55
4	Orbital mechanics	56
4.1	Two-body motion under gravity: Keplerian orbits	56
4.1.1	All orbits	57
4.1.2	Elliptical orbits	58
4.1.3	Circular orbits	59
4.1.4	Escape velocity	60
4.1.5	Hyperbolic orbits	61
4.2	Changing orbits	64
4.2.1	Hohmann transfer	64
4.2.2	Other transfer orbits	66
4.2.3	Oberth effect	68
4.3	Gravity assist	69
4.3.1	Concept	69
4.3.2	Gravity assists on real bodies	73
4.4	Summary	76
4.5	Exercises	76
5	Thermal rockets	78
5.1	Rocket thermodynamics	78
5.2	Convergent–divergent nozzle	82
5.3	The rocket as a heat engine	87
5.4	Chemical rockets	88
5.4.1	Liquid fuels	89
5.4.2	Solid fuels	91
5.5	Real rockets	92
5.6	Summary	93
5.7	Exercises	95
6	Ion engines	96
6.1	Principle	96
6.2	Power, potential, and propellant	100
6.3	Example application: Dawn	102
6.4	Other types of ion engine	105
6.5	Summary	106
6.6	Exercises	107
7	Relativistic motion	108
7.1	Basic relations	108

7.2	Lorentz transformations	109
7.3	Constantly accelerating spacecraft	112
7.4	Force and Newton's second law	116
7.5	Relativistic rocket equation	117
7.6	A trip to Alpha Centauri	119
7.6.1	Twin paradox	121
7.7	Photon rocket	122
7.8	Mixed matter/photon rocket	124
7.8.1	Effective exhaust velocity	126
7.8.2	Mass losses	127
7.8.3	Energy efficiency	128
7.9	Summary	131
7.10	Exercises	131
8	Nuclear rockets	133
8.1	Nuclear binding energy	133
8.2	Nuclear fission	134
8.3	Fission rocket	138
8.3.1	Thermal fission rocket	138
8.3.2	Fission fragment rocket	141
8.3.3	Fission pulse rocket	144
8.4	Magnetic nozzle	146
8.5	Nuclear fusion	147
8.5.1	Reactions for rockets	151
8.5.2	Effective exhaust velocities	154
8.6	Fusion pulse rocket	155
8.7	Other fusion propulsion schemes	158
8.8	Antimatter propulsion	160
8.8.1	Main reactions	161
8.8.2	Use in a rocket	162
8.8.3	Thrust augmentation	165
8.8.4	Practicalities	166
8.9	Summary	168
8.10	Exercises	169
9	Relativistic optical effects	170
9.1	Source direction and size: Aberration	170
9.2	Source frequency and wavelength: Doppler effect	176
9.3	Source brightness	179
9.4	Summary	181
9.5	Exercises	182
10	Solar sails	183
10.1	Radiation pressure	183

10.2	Forces on a sail	184
10.3	Solar sail orbits	186
10.3.1	Sail pointed at the Sun: Keplerian orbits	187
10.3.2	Sail inclined: Non-Keplerian orbits	188
10.4	Imperfectly reflecting sail	189
10.5	Sail materials	191
10.6	Missions	196
10.6.1	IKAROS	197
10.6.2	Interstellar mission concepts	199
10.7	The Sundiver	200
10.8	Summary	202
10.9	Exercises	203
11	Laser sails	204
11.1	Relativistic kinematics of a laser sail	204
11.1.1	Reflection of photons off a relativistic sail	204
11.1.2	Energy efficiencies for perfect reflection	207
11.1.3	Equation of motion	209
11.1.4	Solution of the equation of motion	212
11.1.5	Power received by the sail	215
11.2	Optics and arrays	216
11.2.1	Diffraction	216
11.2.2	Aperture synthesis	219
11.2.3	Atmospheric distortion and adaptive optics	222
11.3	Lasers	225
11.3.1	How much power?	225
11.3.2	Arrays of lasers	226
11.4	Sail structure	227
11.4.1	Materials	227
11.4.2	Shape and stability	230
11.5	Lasers in space	232
11.6	Laser sail missions	233
11.6.1	High-mass payloads	234
11.6.2	Low-mass payloads	234
11.6.3	Intermediate-mass payloads	235
11.6.4	Using a light sail to brake at the target system	237
11.7	Summary	239
11.8	Exercises	240
12	Interstellar medium	242
12.1	Solar system	242
12.2	Solar wind and its interaction with the interstellar medium	243
12.3	Composition of the interstellar medium	245
12.3.1	Atoms, ions, and electrons	246

12.3.2 Molecules, dust, and rocks	248
12.3.3 Cosmic rays and magnetic fields	250
12.4 Impacts on a spacecraft	250
12.4.1 Collision rate	250
12.4.2 Damage by atoms and ions	251
12.4.3 Damage by dust	255
12.4.4 Implications for spacecraft design	258
12.5 Drag on a spacecraft	260
12.6 Bussard ramjet	261
12.6.1 Principle	262
12.6.2 A ramjet's journey	266
12.6.3 Challenges	269
12.7 Summary	270
12.8 Exercises	271
13 Magnetic and electric sails	273
13.1 Magnetic sails	273
13.1.1 Concept	273
13.1.2 Application	276
13.1.3 Other magnetic sail concepts	279
13.2 Electric sails	280
13.2.1 Combining magnetic and electric sails	285
13.3 Summary	285
13.4 Exercises	286
14 Navigation	287
14.1 The need for navigation	287
14.2 Inertial navigation	288
14.2.1 Accelerometers	289
14.2.2 Gyroscopes and orientation	290
14.2.3 Clocks	291
14.2.4 Use in space travel	292
14.3 Navigation in the solar system by ranging	293
14.4 Stellar astrometric navigation	296
14.4.1 Principle	296
14.4.2 Implementation and simulation results	299
14.5 Pulsar navigation	303
14.5.1 Pulsars	303
14.5.2 Navigation principle	305
14.5.3 Application within the solar system	308
14.5.4 Pulsars for interstellar navigation	310
14.6 Relation to global navigation satellite systems	312
14.7 Spacecraft control	314
14.8 Summary	315

14.9 Exercises	316
15 Communication	317
15.1 Requirements and issues	317
15.2 Power received: The Friis transmission equation	318
15.2.1 A relativistic correction	321
15.3 Spacecraft pointing accuracy	322
15.4 Modulation	323
15.5 Noise	326
15.6 Contaminating light from the target star	328
15.7 Communication in the presence of noise	331
15.7.1 Example error-correcting code: Repetition coding	332
15.7.2 Channel capacity from the Shannon–Hartley theorem	334
15.7.3 Channel capacity at low photon rates	337
15.8 Choice of wavelength and location of receiver	341
15.8.1 Absorption and emission from the Earth’s atmosphere	342
15.8.2 Receivers in space	344
15.8.3 Technological issues affecting the choice of wavelength	345
15.9 Case studies	347
15.10 Summary	349
15.11 Exercises	350
16 Payloads	351
16.1 Scientific instruments	351
16.2 Power	358
16.3 Relays and swarms	362
16.4 Autonomous control	364
16.5 Summary	365
16.6 Exercises	366
17 Outlook	367
17.1 The edge of physics	367
17.1.1 Warp drives	367
17.1.2 Wormholes	368
17.1.3 Other ideas	369
17.2 Challenges and solutions	370
17.3 Broader issues of interstellar travel	372
17.4 Where do we go from here?	374
Appendix Further reading	377
A.1 Introduction	377
A.2 Why travel to the stars?	377
A.3 Rockets	378
A.4 Orbital mechanics	379

A.5 Thermal rockets	379
A.6 Ion engines	379
A.7 Relativistic motion	380
A.8 Nuclear rockets	380
A.9 Relativistic optical effects	381
A.10 Solar sails	382
A.11 Laser sails	382
A.12 Interstellar medium	384
A.13 Magnetic and electric sails	385
A.14 Navigation	385
A.15 Communication	386
A.16 Payloads	387
A.17 Outlook	387
<i>Bibliography</i>	389
<i>Index</i>	407
